

Enstso JANVIER

IT Analyst Engineer

✉ enstso@outlook.fr ☎ 0695024332 📍 Paris, France 🌐 Enstso.J 📧 Enstso 🔗 enstso.com 🚗 Permis B

SKILLS

Languages : C#, JavaScript, TypeScript, NodeJs, Go, Python, Shell, PHP, SQL, HTML, CSS

Frameworks : .NET, .NET Core, ASP .NET Core, .NET Framework, Flask, React, Angular, Remix, VueJs, AdonisJs, Symfony, Express, CodeIgniter, NestJs, Laravel, JQuery, GraphQL, MongoDB

Cloud & DevOps : IBM Cloud, Azure, AWS, Docker, Kubernetes, OpenShift, Terraform, Ansible, CI/CD, GitLab, GitHub, Grafana, Prometheus, FinOps

Information Systems & Project Management : Azure DevOps, Agile/Scrum, backlog management, user story writing, UML modeling, release notes, tech & functional documentation, business requirement gathering, Excel reporting

Networking : TCP/IP, DNS, DHCP, VLAN, VPN, routing & switching fundamentals, subnetting, NAT, firewalling, load balancing, reverse proxy, HTTP/HTTPS, TLS/SSL, network troubleshooting

Cybersecurity : OWASP Top 10, Cyber Kill Chain, audit, cryptography, network service exploitation, HID

Data & Systems : PostgreSQL, MongoDB, Redis, RabbitMQ, Kafka, Linux, Windows, macOS, VMware, Nginx, Apache

Tools : Git, n8n, k6, Selenium, Notion, Slack

PROFESSIONAL EXPERIENCE

IT Analyst Engineer, Freelance

01/2025 – Present

Freelance

- Co-founded **GUIA**, an AI-powered mobile application designed to automate **Energy Performance Diagnosis (DPE)** audits and support the generation of compliant energy renovation reports.
- Designed and developed scalable cross-platform applications using **React Native (Expo)** and **NestJS**, targeting high-usage business models in the energy renovation, dating, and personal services sectors.
- Created an AI-powered technology using **Flask**, **RAG (Retrieval-Augmented Generation)**, and an **open-source LLM** hosted on private servers to process DPE-related documentation and provide intelligent audit assistance.
- Designed and exposed **REST API** endpoints for automated **DPE calculations**, AI-guided information collection, intelligent property data analysis, and photo-based diagnostic assistance.
- Optimized image processing workflows, reducing processing time from approximately **2 minutes to 15 seconds**, achieving an **87.5% reduction** in processing time.
- Implemented intelligent photo analysis features to automatically extract and interpret property-related information, improving audit preparation speed and reducing manual input.
- Built complex business-driven algorithms designed to scale to **millions of users**, supporting high-volume usage and long-term product scalability.
- Used **AI** to automate key parts of the DPE audit workflow, from property data analysis to renovation recommendations, improving operational efficiency and report generation speed.
- Translated business requirements into technical specifications, **UML diagrams**, and scalable software architectures, reducing ambiguity between product, technical, and business stakeholders.
- Actively contributed to product strategy, feature ideation, contract definition, and technology stack decisions, aligning technical delivery with business objectives.
- Designed and optimized cloud-native architectures focused on **performance, high availability, scalability, cost efficiency**, and long-term maintainability.
- Managed **Agile / Scrum** delivery, including backlog structuring, feature breakdown, prioritization, and iterative delivery coordination.
- Conducted cost analysis and scalability planning to ensure infrastructure choices remained aligned with expected user growth and business constraints.
- Provided consulting on blockchain-oriented cloud architectures, including strategy definition, resource allocation, and decentralized infrastructure integration.
- Developed cluster federation management features using **Remix** and **AdonisJS**, covering orchestration, monitoring, infrastructure management, and user management to improve resilience and high availability.
- Strongly contributed to strategic decision-making by providing expertise in **AI, cloud-native architectures**, scalable systems, and decentralized technologies.

IT Analyst Engineer, Apprenticeship

09/2024 – 09/2026

BNP Paribas Asset Management

- Contributed to the development of a **CMDB (Configuration Management Database)** built with **.NET** and **Angular**, used as a reference application to support the migration of approximately **80 on-premises applications** to **IBM Cloud**.
- Worked with a multidisciplinary team of **.NET**, **Python**, **Angular**, **DevOps**, and **Cloud** specialists to define reusable standards, cloud best practices, and technical patterns adopted across multiple development teams.
- Helped establish a reference architecture enabling internal teams to transition toward **Cloud Developer** practices and improve cloud-native application delivery.
- Developed scalable features for an **Angular** and **.NET** application focused on cloud resource management, improving reliability, maintainability, and operational efficiency.
- Contributed to major technical migrations, upgrading the backend from **.NET 8** to **.NET 10** and the frontend from **Angular 17** to **Angular 20**, covering **5 major technology version upgrades** in total.
- Managed applications deployed on a **Kubernetes** cluster hosted on **IBM Cloud**, including namespace administration, deployment file maintenance, pod monitoring, service monitoring, ingress management, and releases through **Azure DevOps CI/CD** pipelines.
- Designed and implemented **multi-pod processing** on **Kubernetes** to support **hundreds of simultaneous users**, improving scalability, workload distribution, and application resilience.

- Optimized an **asynchronous multithreaded processing workflow**, reducing execution time from several hours to approximately **5 minutes**, achieving over **95% processing time reduction**.
- Contributed to the design of a robust **Entity Management System**, improving consistency, coherence, and maintainability across application models and business entities.
- Participated in the development of reusable **NuGet packages** designed for **microservices architectures**, covering **Kafka, Secret Manager, Translation, Redis, CRUD operations**, and shared technical services to standardize development practices across the organization.
- Ensured application stability and quality by implementing unit tests on the **Angular** frontend with **Jasmine/Karma** and the **.NET** backend with **NUnit** and **xUnit**, achieving approximately **80% code coverage**.
- Created **PostgreSQL** scripts, including cursor-based scripts, to restore data consistency across records while respecting **ACID** principles.
- Improved database reliability and performance through table structure optimization, **SQL migration scripts**, and correction of existing data inconsistencies.
- Analyzed **Excel** datasets to identify inconsistencies, define remediation strategies, and support data integrity across the application.
- Actively contributed to **Agile** delivery through sprint ceremonies, technical and functional meetings, **Azure DevOps** backlog management, and autonomous ownership of assigned topics.
- Created **UML** diagrams to clarify functional and technical requirements and improve communication between technical and functional stakeholders.
- Strengthened infrastructure knowledge through **Terraform** fundamentals and advanced **Cloud** technology training.
- Contributed to a successful cloud transformation initiative by helping deliver a reference application, reusable components, and best practices supporting the migration of **80 applications to IBM Cloud**.

Full Stack Developer, Apprenticeship

Dataventure Group EDG

09/2023 – 09/2024
Levallois-Perret, France

- Developed high-traffic **landing pages** and client campaign applications designed to handle thousands to millions of users across multiple sectors, including **automotive, food**, and other business domains.
- Built customized client applications dedicated to **lead collection**, qualification, and management using **Symfony, Flask**, and **CodeIgniter**.
- Developed landing pages for client acquisition campaigns using **CodeIgniter**, ensuring fast delivery, responsive interfaces, and campaign-specific customization.
- Created lead management tools with **Flask**, including lead processing features, data manipulation workflows, and automation scripts in **Python**.
- Developed and maintained APIs using **Node.js, PHP**, and **Python** to support lead collection, data synchronization, and integration with external client systems.
- Implemented front-end features using **React** and **Vue.js**, improving user experience, campaign performance, and interface maintainability.
- Dockerized projects using **Docker** to improve deployment consistency, environment portability, and development workflow efficiency.
- Implemented **webhooks** and automation workflows with **n8n** to automate lead delivery, data routing, and integration with client platforms.
- Analyzed and integrated client **API documentation** to ensure reliable data exchange between internal tools and third-party systems.
- Configured **Ubiquiti Layer 3 switches**, contributing to network setup, routing configuration, and infrastructure reliability.
